👤 About

I am Brazilian from Rio de Janeiro, resident in Spain since 2017, I am 35 years old and I have worked as a Graphic Designer and Web Developer since 2004 across a variety of roles and different companies.

I started my career when I was still at school. Since that time, I have been improving my skills doing several courses and studying hard by myself. Due to that, I have been building strong skills in website development. Over the years I have been providing website development with a creative services. Also, I have been dealing with optimization (SEO) and web hosting websites, blogs, portal and anything else related to information technology on the Internet.

My double degrees, "Graphic Design" and "Webdesign and Interfaces", allowed me to get both sides of view: Design and Code. These concepts afford me to develop abilities for both roles Front End and Back End.

Nowadays, my main strengths are HTML, CSS and Javascript, Vue.js and React for the Front End role and PHP, Laravel Framework and WordPress for the Back End role, and also my natural instinct for design. However, my horizon is beyond what I do. In other words, I frequently learn about new codes, trend and conceptions, therefor, I have studied some tools in order to be aware what is the latest technological advances.

I am passionate about what I do because I believe that work and fun go together.
